with diabetes have excess glu-cose or blood sugar in their bloodstream which can negatively affect the whole body, including the cardiovascular system, circulation, eyesight and kidney function. Diabetes is a silent killer and people having Type 2 diabetes often exhibit no symptoms initially. The current exponential rise of diabetes in India is mainly attributed to lifestyle changes. The rapid change in dietary pat-terns, physical inactivity and increased body weight, especially the accumulation of abdominal fat, are some of the primary reasons for increased prevalence of diabetes.

This was stated by noted diabetologist Dr Nidhika Pandey while addressing a free health care camp organised by National Sugar Institute, Kanpur on Friday.

She said there was a need fac people who had suffered from COVID-19 and other loa uo go She said the increase in the diabetic population in the country was mainly due to strong lio genetic factors tied with rapid go urbanisation and lifestyle modification. od

She said since Indians appeared to be generally more insulin resistant (both genetics and lifestyle complications), it would be prudent to advise a healthy lifestyle across the different geographic regions with regard to age groups, proper diet schedule (rich in fibers), followed by exercise (yoga or any other physical activities). She said such efforts were urgently needed to tackle the sudden increase in diabetes and lower the burden of the Indian social and economic conditions.

Addressing the camp, Dr Vipin Srivastava, said diabetes was a kind of metabolic ailment in which the body was incapable of producing insulin, leading to high blood glucose in the body leading to cardio-vascular diseases, kidney ailments, eye problems etc. He said diabetes required

daily personal diet care and if there was a complication, it was a complication, it could have a significant impact on quality of life and could even reduce life expectancy. He said although there was

no cure for diabetes, one could live a comfortable and enjoyable life by adapting and learn-ing about the conditions and effectively managing it.
