MAHOTSAV**

आज़ादी का अमृत महोत्सव

National Sugar Institute, Kanpur

Organizes

Brain Storming Session

On

“ After Co 0238: What Next? ”

29th June 2021 | 11.00 am – 2:00 pm

ABOUT THE WEBINAR

As reported, Uttar Pradesh is experiencing reduced sugarcane productivity during the current sugar season 2020-2021 as compared to last year. The impact may be different in different regions (East, Central, and Western Zones) of the state. This is due to certain issues with the pre-dominant Sugarcane Variety Co 0238 which occupies 95% or even more area in the command area of some sugar factories.

As proactive action, remedial measures are required to be taken up by the sugar factories, sugarcane institutes and concerned state government's agencies to mitigate the problem. The brain storming session is being organized with the objective to create a roadmap for sugar factories in Uttar Pradesh and in fact in Northern India for sustainable sugarcane development through newer sugarcane varieties.
